

### How to Run the application:

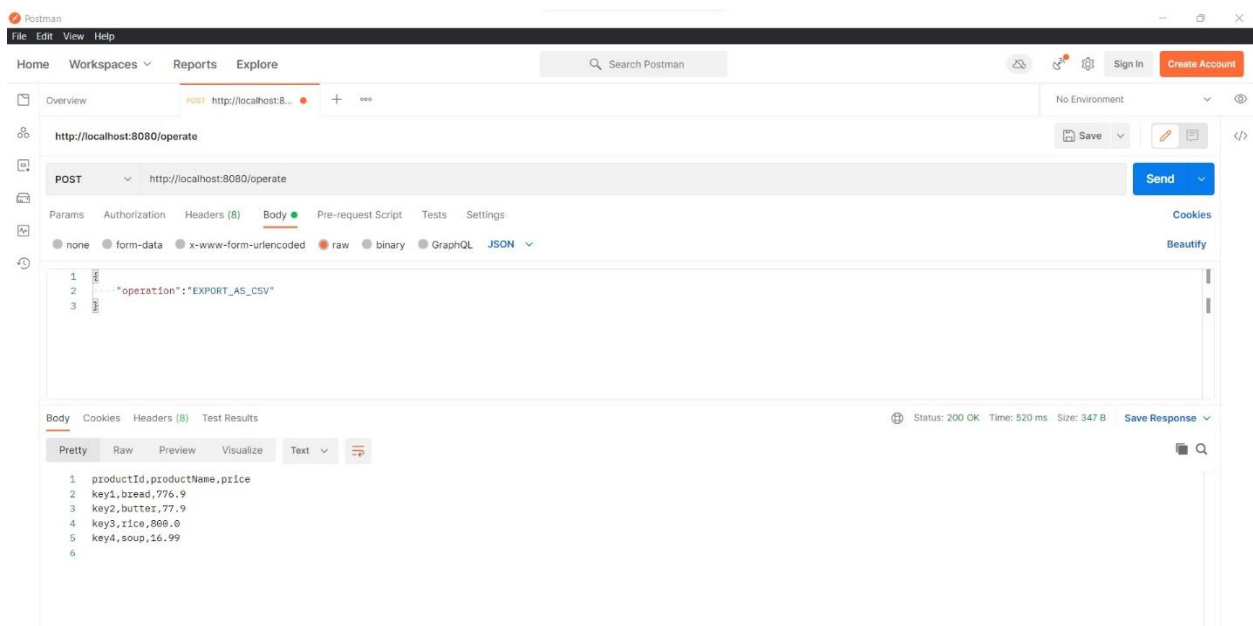

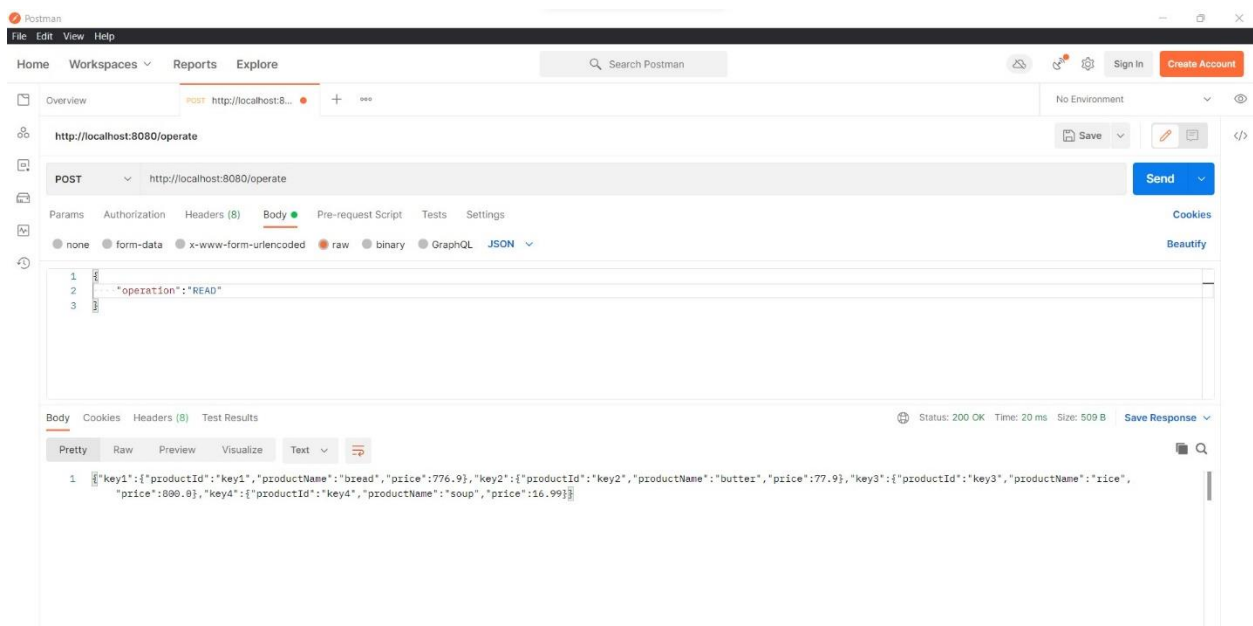

1. Go to the root of the application where build.gradle is available
2. In the terminal, run execute the command **./gradlew bootRun**

[illegible]

Output on executing the command above.

I use **Postman** to test and debug POST with Spring Boot application.

1. Select Request type as "POST"
2. Enter URL as <http://localhost:8080/operate>
3. Click on 'SEND'
4. This will show the response sent by the server in the body.

Screenshot: Post man testing

Additional feature included is “export data as Csv” where the JSON product data is exported as Csv.
